

# Reflection for UNIX, iOS and Android Editions

## Wherever, Whenever Administration

As the IT landscape grows more complex, so does demand for fast, responsive IT. Now Micro Focus® Reflection® for UNIX puts connectivity in the palm of your hand. With the Reflection for UNIX SSH client, you get wherever, whenever access to your UNIX/Linux servers from iOS and Android mobile devices.

### Product Highlights

#### Perform Dynamic Workflows on the Go

Reflection for UNIX allows you to focus on real work from first launch—with no training required. Reflection's user experience is optimized for productivity on the go, with a modern look and feel consistent with your favorite mobile devices.

You'll work faster with features like:

- ConnectBox, which allows you to open sessions quickly using a familiar mobile interface.
- Session Switcher, so that you can move deftly between applications during daily disruptions.
- Keybar, which gives you easy access to commonly used characters that mobile keyboards often bury behind multiple taps.

With Reflection for UNIX, you'll spend less time configuring and start being productive right away.

#### Protect and Authenticate

Reflection for UNIX is a robust SSH client that secures sensitive data as it passes over the network.

With Reflection for UNIX, users can authenticate to server applications using SSH-based options such as username/password, key-based authentication, and keyboard interactive. And Reflection even helps you save time by automating the authentication process, so that users can log on across multiple applications using different credentials.

#### Get Trusted Help and Easy Upgrades

In the evolving and unpredictable mobile market, know that you're using a trustworthy solution from a proven provider. In the event of a security issue or other critical problem, Attachmate provides the unique option to work over the phone with a seasoned support technician—so that you can be up and running again as quickly as possible.

### Quick View
